Dimensional Weight Calculation

For Domestic shipments: UPS Ground and Air service shipments – If the cubic size of the package is larger than 864 inches, divide the cubic size by 166 to determine dimensional weight in pounds. If the cubic size of the package is 864 inches or less, use the actual weight of the package. Increase any fraction to the next whole pound.

For International shipments: For export and import shipments, divide the cubic size in inches by 139 to determine the dimensional weight. Increase any fraction to the next whole pound. For import shipments by way of UPS Standard™ from Canada, divide the cubic size in inches by 139 to determine the dimensional weight. Increase any fraction to the next whole pound.

Domestic Dimensional Weight in Pounds = $L \times W \times H / 166$

U.S. Export and Import Dimensional Weight in Pounds = $L \times W \times H / 139$

L= Length in inches

W= Width in inches

H= Height in inches

For additional information on determining weight and size please refer to the latest UPS Rates and Service Guide – Daily Rates.
